

# PowerCom

For Use With  
Reply Worldwide

## Audience Polling For PowerPoint

**PowerCom** is a PowerPoint® plug-in that adds audience polling capability to your presentation. It is designed for use with the Fleetwood Reply Worldwide system, and currently supports up to 3750 wireless keypads. Sizes supporting as few as 100 keypads are also available.

Polling your audience is extremely easy with PowerCom. Once installed, the system adds a toolbar to PowerPoint. You simply create a slide in PowerPoint as you normally would, and type your question. Be sure to leave some room for a graph though.

Next, insert the PowerCom Poller by clicking the toolbar icon. This will launch a 4 step wizard that prompts you to enter the number of choices, set a correct answer if there is one, select a graph type (or use the default) and select polling music if you wish.

*Standard opinion polling features allow you to present a question, poll the audience, and then show the results. This is a highly effective means for generating quality discussion.*

And since you are using PowerPoint, you can easily insert questions anywhere in the slide show. In fact, once you add the PowerCom poller to one slide, you can simply copy & paste it to any number of other slides.

Making changes such as the number of choices, the graph style, labels, fonts and colors is also a breeze. These controls are all on the toolbar.

*During your slide show, polling is automatically opened when you reach a PowerCom slide. A counter displays the number of votes cast, as they come in.*

When you are ready, you press the spacebar to close polling and once again to display the graph. It's just that easy.

Once your slide show has been presented, PowerCom offers a number of basic reports and allows you to save your data as a Microsoft Word document. You can also use the pivot table feature to create Excel spreadsheets.

This easy to use, stable plug-in is ideal for trainers and presenters who have existing libraries of PowerPoint presentations and who wish to add an interactive element without having to learn a separate software product.

List price for PowerCom is just \$998.00 for up to 100 Reply Worldwide keypads.

**- PowerCom requires Microsoft PowerPoint 2000 or higher -**

## Capacities & Features – PowerCom 2.0

---

### **Capacities**

Maximum number of Keypads supported: 100, 250, 500, 1000, 3750 (4550 EU)

Maximum number of base stations supported: 15

Number of choices per question: 10

### **Requirements**

Microsoft PowerPoint 2000 or higher

Windows XP or Windows 2000

Internet Explorer 6.0 or higher

Windows Media Player must be operational to play polling music

One or more USB ports must be available to use a Reply Worldwide system

One or more serial ports must be available to use a standard Reply Worldwide system
